

ABOUT THE COMPANY

Situated in Ukraine, PEAT LAND UKRAINE LLC is a company specializing in the production and sale of peat substrates under the trademark "PEATFIELD". The company was founded in 2008.

Our plant is situated in the western part of Ukraine, in Rivne region, near the city Dubrovitsa.

The company's operations include the full cycle: from construction of peatlands and peat extraction to production and sale of peat substrates.

Our peat substrates are manufactured on ultra-modern equipment from leading European producers (Slootweg, Bocedi, Newtec, Render Technology etc.) from ecologically clean raw materials.

The company strives to become the leading producer of peat substrates in Ukraine and puts much efforts on expanding its markets within Europe and world.

RESOURCES AND QUALITY

The peat raw materials for PEATFIELD Substrates come exclusively from designated areas owned by our company. The company operates peatbogs “Morochno-1” and “Morochno-2” (which are situated in picturesque forest areas of Dubrovitsa district, Rivne region), covering in total the area of over 300 ha.

The qualitative properties and decomposition rate of our peat resources are ideally suited for use in professional horticulture, which is confirmed by several analyzes, which we carried out in the famous foreign laboratories. Products of PEAT LAND UKRAINE LLC are certified according to ISO 9001 and ISO 14001.

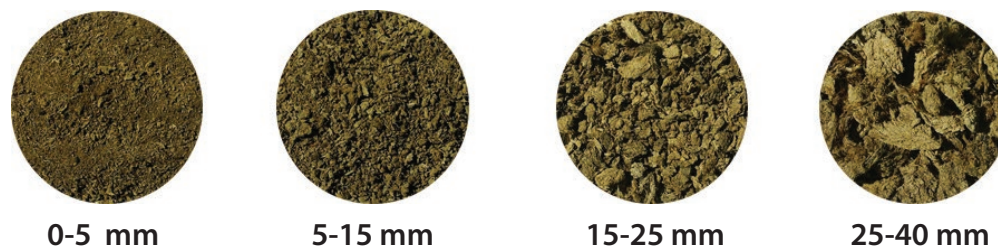

In the near future company plans to obtain certification of production in accordance with the standards of the RHP (Regeling Handels Potgronden, NL), the most comprehensive and strictest quality control of our industry.

OUR PRODUCTS

Key specialization of PEAT LAND UKRAINE LLC is the production of high quality peat substrates for use in professional horticulture. We can produce approximately 500 000 m³ of substrate a year.

PEAT LAND UKRAINE LLC can provide the following peat fractions in its substrates:

In our substrates we use a range of different additives, high quality mineral fertilizers from worldwide recognized producers and wetting agent for better water capacity. Tested and certified base materials are transported to the production site, stored under cover and strictly controlled, in order to exclude the risk of incorrect mixing or contamination. Then substrate components are prepared and mixed using latest technical methods.

PEATFIELD Substrates product line covers all the important growing processes and methods from sowing through growing-on to ecological cultivation.

We understand the importance of quality of growing media for professional growers, therefore we put our emphasis on maintenance of constant high quality of our peat substrates, which ensures healthy, consistent development of the crops. Each product has a fully tried and tested composition and has proven itself in many applications.

For every batch, a production record of the mixing line used is kept; this registers the quantities of substrate components used, the weight by volume and the produced quantity.

INDIVIDUAL PEAT PRODUCTS

PEAT LAND UKRAINE LLC can produce substrates according to the client's individual recipe and also in the client's own packaging, if necessary.

The customization can be applied to proportion of peat and different additives, use of different peat fractions etc.

PEATFIELD SUBSTRATES

PL-1

Description

Mix of white peat (0-5 mm), perlite (1-5 mm), lime and fertilizer

Structure 0-5 mm
pH 5,8-6,0
Wetting agent 0,2 L/m³
Packaging 250L 4.500L – 6.000L

Use

Ready-to-use peat substrate for growing of seedlings of vegetable and flower crops (tomatoes, cucumbers, peppers, leeks, chrysanthemums), for forcing bulbs of flower plants, for greenhouse cultivation of radish and fennel, for the cultivation of beet, peas, potatoes and beans

PL-2

Description

Mix of white peat (5-15 mm), perlite (1-5 mm), lime and fertilizer

Structure 5-15 mm
pH 5,8-6,0
Wetting agent 0,2 L/m³
Packaging 250L 4.500L – 6.000L

Use

Ready-to-use peat substrate for a wide range of applications. Designed for the diving and landing of vegetables, ornamental plants in bags and pots with a diameter up to 11 cm

PACKAGING AND LOGISTICS

Our plant has 4 packaging lines.

Products of PEAT LAND UKRAINE LLC are available:

- in bags of various volumes (from 6L to 250L);
- in Big Bales;
- in bulk.
